

## MRI scan

At KIMS Hospital, we offer fast access to private diagnostic MRI scans, so you receive results in a timely way. Using magnetic fields and radio waves to produce detailed images of the inside of the body, an MRI scan can diagnose and assess injury and monitor the progress of your treatment.

### Specialist MRI scanners in a reassuring environment

We understand that undergoing any type of scan can be daunting, which is why our dedicated team of experienced MRI radiographers will be with you every step of the way. If you struggle with feelings of claustrophobia, we can carry out your scan in our wide bore scanner to provide a more reassuring environment. We offer appointments seven days a week, including early morning, late evening and weekends, so you can be treated at a time that works for you.

### Prices & payment

We offer a guide price of:

MRI scan - 1 part  
£420

MRI scan - 2 part  
£700

MRI scan - 3 part  
£900

The guide price is based on the usual clinical needs of patients. For more information, please see our [terms and conditions](#).

## MRI scan FAQs

### Who can have an MRI scan?

Anyone can have an MRI scan as there is no radiation involved; this includes patients who are

more vulnerable to the effects of radiation such as pregnant women, young children and the elderly. However, it is not always possible for people who have certain types of implanted medical devices fitted to have an MRI scan. For example, someone fitted with a non-conditional MRI safe pacemaker would not be able to have an MRI.

You will need to have been referred for an MRI by a qualified healthcare professional, such as your GP, consultant, an osteopath or a physiotherapist. It is important that the referral information is thorough, as this will allow the MRI team to tailor the scan to best suit your diagnostic needs.

## What happens at my appointment?

The Imaging team will ask you to complete a consent form for your scan and check that you have completed an MRI safety questionnaire. We ask that all patients, and anyone accompanying them into the MRI environment, complete these forms.

Your MRI radiographer will confirm your personal and clinical details with you and be able to answer any questions you may have. In the MRI examination room, they will explain what will happen during the scan and make sure you are as comfortable as possible.

Unfortunately, all MRI scanners are noisy. Depending on the examination you need, you will be given either earplugs or headphones to help soften the noise. If you are offered headphones, you are welcome to choose your favourite radio station to be played during the scan or you can bring your favourite music on a CD.

Your radiographer will show you how to contact them, should you need to speak to them at any point during your scan, and will also show you the room where they will be seated whilst your scan takes place. Once your radiographer has positioned you correctly on the scanner bed, they will leave the room and watch you on the scanner's monitor through the glass window in the adjacent room.

The radiographers can hear and see you at all times, so please do not worry. They will communicate with you throughout the examination, updating you on progress of the scan. Each body part normally takes about 30 minutes to scan, which means, for a three-part scan where three different areas of the body need scanning, it would take approximately 90 minutes.

When the scan is completed, your MRI radiographer will remove your ear protection and take you back to the private changing room for you to get dressed.

## What should I wear for my MRI scan?

It is important to remember to wear minimal jewellery and simple clothing, which you can easily take off. We can provide a locker, however it is best to leave jewellery, watches and any other metal valuable items at home or with someone who is accompanying you for your appointment.

You will then be required to change into a comfortable hospital gown.

## When will I get my results?

During your MRI scan a large number of images are obtained. One of our team of consultant Radiologists will review the scans and produce a report. The majority of reports will be produced within two working days of your appointment. Kindly note, that the Radiographers who undertake your MRI scan are unable to give you any indication of the results of the scan.

Your report will be sent to your referring medical professional such as a consultant, GP or physiotherapist who will be able to give you the results of your scan. Please arrange a follow-up appointment with them.
